1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
2. The drawings are objected to because the boxes e.g. 1,2,7 have not been labeled. Each box 1,2,7 should be identified. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. Claim 6 is objected to because of the following informalities:

In claim 6, the term "located" does not make sense; perhaps applicant intends to use "connected" instead.

Appropriate correction is required.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Mourad et al. (6,236,175).

As to claims 1,6-7, Mourad discloses an apparatus for measuring a rotational speed of an electric motor including activating the motor for a defined measuring time at a time interval to be determined (col. 1, lines 57-68) and measuring a frequency of current ripples (col. 3, lines 32-41) that is proportional to the rotational speed of the motor (Figures 1,2). Mourad discloses a circuit element (figs. 1,3); a current proportional voltage-measuring device (fig. 2); filter 9; and an evaluation circuit 8 (note figs. 1-3).

As to claims 2-5, Mourad teaches to measure the rotational speed from the frequency of the ripples. It is inherent that the speed can be determined from the interval between the square wave voltage pulses (note figure 2).

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note PTO-892.
